

Synopsis

Library Management System

Introduction

The Library Management System is a software project designed to manage the activities of a library in an efficient and organized way. This system helps in maintaining records of books, students, issued books, and returned books digitally. It reduces manual work and makes the management process faster and more accurate.

The project provides features such as adding new books, searching books, issuing books, returning books, and viewing records. It is useful for schools, colleges, and public libraries to maintain data properly.

Objectives

1. To manage library records digitally.
2. To reduce manual paperwork and save time.
3. To maintain details of available and issued books.
4. To make searching books easy and fast.
5. To improve accuracy and efficiency in library management.

Features of the System

- Add new books
- Search books
- Issue books to students
- Return books
- View available books
- Maintain student records
- Store and update library data

Advantages

- Easy to use
- Saves time
- Reduces human errors
- Fast data management
- Organized record keeping

Technologies Used

Component	Technology Used
Programming Language	Python
Database/File Handling	MySQL / File Handling
Interface	Tkinter (if GUI used)
Platform	Windows

Conclusion

The Library Management System is an effective solution for managing library operations digitally. It helps librarians maintain records efficiently and provides a simple and user-friendly system for handling books and

student information.
